Response:

- A. 16
- B. 2
- C. 8
- D. 4

Answer: A

Question: 10

A Belt working in a supply chain environment has to make a decision to change suppliers of critical raw materials for a new product upgrade.

The purchasing manager is depending on the Belt's effort requiring that the average cost of an internal critical raw material component be less than or equal to \$4,200 in order to stay within budget.

Using a sample of 35 first article components, a Mean of the new product upgrade price of \$4,060, and a Standard Deviation of \$98 was estimated.

Select the answer that best states the Practical Problem.

Response:

- A. If the average cost per component is \$4,200 or less, then the purchase manager will introduce the new product upgrade with new components.

- B. If the average cost per component is greater than \$4,200, then the purchase manager will introduce the new product upgrade with new components.
- C. Only if the average cost per product upgrade is \$4,060, will the purchase manager introduce new product upgrades with new components.
- D. If the average cost per new product upgrade is less than \$180, then the purchase manager will introduce the new product upgrade with new components.

Answer: A
