Question: 1

Which utility operation should an administrator perform within Backup Exec when adding new blank media?

Response:

- A. Catalog
- B. Import
- C. Label
- D. Inventory

Answer: D

Question: 2

An administrator used SGMon.exe for troubleshooting and closed it once the issue was resolved, but the debug logs keep increasing and the C drive is running out of space.

How can the administrator disable the debug logging?

Response:

- A. open SGMon.exe again, stop the live debugging, and close it
- B. open the task manager and kill SGMon.exe
- C. open SGMon.exe and uncheck the option Enable job engine and agent for windows debugging outside the debug monitor
- D. open ServicesMgr.exe, stop the Backup Exec services, delete the debug logs, and restart the services

Answer: C

Question: 3

An administrator starts a restore of multiple backup sets with different resource types. While using the restore Wizard, the administrator submits the restore settings for the C drive, but cancels the restore settings for the SQL Database.

What is the result of the restore jobs?

Response:

- A. Both restore jobs are canceled.
- B. Only the C drive restore job is created and runs.
- C. Neither the C drive restore job or SQL restore jobs are created.

D. Both the C drive restore job and SQL restore jobs are created and run.

Answer: B

Question: 4

Question: 6

Which technology increases deduplication efficiency in an image-level backup of a VMware virtual machine?

Response:

- A. VMware vStorage API
- B. off-host backups (SAN)
- C. Stream Handler technology
- D. Change Block Tracking (CBT)

Answer: C

Question: 7

What is the recommended amount of free RAM on the Backup Exec server to support 5 TBs of deduplicated data?

Response:

- A. 5 GB
- B. 7.5 GB
- C. 8 GB
- D. 10 GB

Answer: C

Question: 8

An administrator cancels a restore job in the middle of the process. What is the result?

Response:

- A. All files written up to the point of being canceled are deleted from the system.
- B. All files written up to the point of being canceled are left on the system.
- C. All files from the restore job are written and later deleted when the job completes.
- D. All files from the restore job are written and later rolled back.

Answer: B

Question: 9

Which two backup job default settings are available in the Verify pane?

(Select two.)

Response:

- A. after job finishes, as a separate job
- B. run job again if verify fails
- C. as a separate scheduled job
- D. after job finishes, if no errors
- E. verify only defined subset

Answer: A,C

Question: 10

An Active Directory domain includes six domain controllers. One of the domain controllers crashed due to a power surge.

Which Backup Exec method should an administrator use to recover the failed domain controller without affecting the other domain controllers?

Response:

- A. Authoritative restore
- B. restore the domain controller as a read only domain controller
- C. Non-Authoritative restore
- D. restore using Ntdsutil

Answer: C
