Question: 1

For service providers, which aspect of VeloCloud's SD-WAN solution simplifies management across a large client base?
Response:

A. Decentralized management requiring client intervention
B. Centralized cloud-based management
C. Client-specific hardware deployment
D. Individual network setups without common policies

Answer: B

Question: 2

What is an essential component to verify during the solution validation phase to ensure data integrity?
Response:

A. Multi-protocol label switching
B. Data encryption at rest and in transit
C. Bandwidth reservation policies
D. Gateway redundancy mechanisms

Answer: B

Question: 3

A company experiences poor application performance during peak hours due to bandwidth congestion. Which SD-WAN feature directly addresses this issue?
Response:

A. Static IP routing
B. Manual failover systems
C. Dynamic Multi-Path Optimization
D. Single link usage

Answer: C

Question: 4

How does VMware SD-WAN support application performance over internet links?
Response:

A. By prioritizing application traffic
B. By statically routing traffic through data centers
C. By encrypting all outbound traffic
D. By decreasing bandwidth availability

Answer: A

Question: 5

SD-WAN would be particularly effective in scenarios involving what two requirements?
(Choose Two)
Response:

A. High-quality video conferencing across different regions
B. Uniform security policies across all network edges
C. Low-bandwidth data transfers
D. Independent local networks with no interconnectivity

Answer: A,B

Question: 6

Which two functions are performed by VeloCloud Gateways within the SD-WAN solution?
(Choose Two)
Response:

A. Optimizing data routes to cloud services
B. Hosting the network's primary data storage
C. Providing secure and efficient data traffic distribution
D. Acting as primary user authentication points

Answer: A,C

Question: 7

During solution validation of VMware SD-WAN, what aspect is crucial to check for effective load balancing?
Response:

A. Convergence time
B. Security protocol efficiency
C. Traffic distribution across links
D. Encryption speed

Answer: C

Question: 8

An SD-WAN feature that allows the network to continue operating effectively even when one link fails by automatically rerouting traffic is known as what?
Response:

A. Manual failover
B. High availability
C. Link resilience
D. Automatic failover

Answer: D

Question: 9

What is a critical step in the validation process of a VMware SD-WAN solution post-deployment?
Response:

A. Testing failover to legacy infrastructure
B. Reducing the number of active links
C. Disabling security protocols to increase speed
D. Ignoring minor packet losses

Answer: A

Question: 10

Which SDN characteristic is emphasized by SD-WAN to improve network agility and scalability?
Response:

A. Hardware-based configuration

B. Centralized control
C. Fixed data pathways
D. Manual setup and maintenance

Answer: B
