- 24/7OnlineChat Support
- ItsLatestVersion

# Latest Version: 6.1

## Question: 1

When addressing connectivity issues in a Client-to-Site VPN, what should be the initial focus?  
Response:

- A. Analyzing the encryption domain
- B. Verifying the client's VPN configuration
- C. Checking the compatibility of VPN client versions
- D. Examining the integrity of digital certificates

**Answer: B**

## Question: 2

After restoring a Management Server in a High Availability configuration, what is the next critical step?  
Response:

- A. Reboot the secondary server
- B. Perform a manual failover test
- C. Synchronize the management servers
- D. Update the software on the secondary server

**Answer: C**

## Question: 3

During advanced gateway troubleshooting, identifying high CPU usage is critical. Which command helps in pinpointing the processes consuming high CPU?  
(Choose Two)  
Response:

- A. top
- B. cpview
- C. fw ctl pstat
- D. fw ctl multik stat

**Answer: A,B**

### Question: 4

What is a critical component to check when troubleshooting Site-to-Site VPN issues in Check Point?  
Response:

- A. The strength of the encryption algorithm
- B. The status of VPN tunnels in SmartView Monitor
- C. The consistency of NAT rules
- D. The availability of the ISP link

**Answer: B**

### Question: 5

How do you differentiate between user mode and kernel mode debugs when troubleshooting Identity Awareness?  
Response:

- A. User mode debugs involve system logs, while kernel mode involves packet captures.
- B. User mode debugs are real-time, while kernel mode is historical.
- C. Kernel mode debugs use 'fw ctl debug', while user mode uses daemon-specific commands.
- D. User mode debugs focus on user interfaces, while kernel mode focuses on backend processing.

**Answer: C**

### Question: 6

What are the key components to check during advanced Access Control troubleshooting when a user complains about unexpected application blockage?

(Select two)

Response:

- A. Layer visibility in the policy
- B. Log and alert settings for the rule
- C. Application and URL filtering settings
- D. Time-related conditions in the rule

**Answer: A,C**

### Question: 7

Which Check Point command would you use to analyze real-time traffic through the Security Gateway?  
Response:

- A. cpview
- B. fw ctl zdebug drop
- C. fw monitor
- D. top

**Answer: C**

### Question: 8

Within Advanced Troubleshooting with Logs and Events, what is a key sign that a critical system event is not being logged as expected?  
Response:

- A. High CPU usage on the Management Server
- B. Inconsistent log entries across similar devices
- C. Absence of expected logs during a known event timeframe
- D. Slow response in SmartConsole

**Answer: C**

### Question: 9

In Advanced Site-to-Site VPN Troubleshooting, what is a vital step when there is a mismatch error in IKE Phase 1 negotiations?  
Response:

- A. Verifying the pre-shared keys match on both ends
- B. Checking for consistent NAT traversal settings
- C. Ensuring that anti-spoofing is correctly configured
- D. Comparing the DH group settings on both sides

**Answer: D**

### Question: 10

For advanced Identity Awareness troubleshooting, what is a common issue when users are not being identified correctly?  
Response:

- A. Misconfigured access roles
- B. Incorrect LDAP group mapping
- C. Firewall rule base misconfiguration
- D. Inadequate session timeout settings

**Answer: B**
