Question: 1

What security feature should be avoided in wireless networks, as it can be easily bypassed?

Response:

- A. Shared Key Authentication
- B. WPA3
- C. 802.1X/EAP
- D. Pre-Shared Key

Answer: A

Question: 2

How can RF signal propagation be affected by obstacles or materials?

Response:

- A. Gain and loss
- B. Reflection
- C. Refraction
- D. Scattering

Answer: D

Question: 3

Which factor can contribute to security issues in a wireless network if the passphrase is not properly configured?

Response:

- A. Configuration errors
- B. Incorrect passphrases
- C. Incompatible EAP methods
- D. Incorrect network keys

Answer: B

Question: 4

What is the term used to describe the process of restricting network access based on a device's MAC address?

Response:

- A. WEP
- B. Shared Key Authentication
- C. Hidden SSIDs
- D. MAC filtering

Answer: D

Question: 5

Which characteristic of an RF signal is related to the distance between successive peaks?

Response:

- A. Frequency
- B. Amplitude
- C. Phase
- D. Wavelength

Answer: D

Question: 6

What are some common causes of mobility problems in wireless networks?

Response:

- A. Configuration errors
- B. Improper network settings
- C. Unsupported fast roaming methods
- D. Non-implemented roaming features

Answer: A

Question: 7

Which security problem can occur if the network key used for authentication during the join process in a wireless network is incorrect?

Response:

- A. Configuration errors
- B. Incorrect passphrases
- C. Incompatible EAP methods
- D. Incorrect join keys

Answer: D

Question: 8

What term is used to describe the phenomenon of an RF signal bouncing off a surface?

Response:

- A. Gain and loss
- B. Reflection
- C. Refraction
- D. Scattering

Answer: B

Question: 9

How can a device report the strength of the RF signal it is receiving?

Response:

- A. Wireless scanner tools
- B. Client signal strength reports
- C. RSSI vs. dBm
- D. Output power vs. received signal strength

Answer: B

Question: 10

What is one possible cause of mobility problems in a wireless network if the fast roaming method used by the client is not supported by the access point?

Response:

- A. Configuration errors

- B. Improper network settings
- C. Unsupported fast roaming methods
- D. Non-implemented roaming features

Answer: C
