Question: 1

In what scenario would an activity be considered out of scope for automation?
Response:

A. When the automation effort exceeds the benefits, or the percentage of processed transactions is lower after automation.
B. When the activity involves processing simple, standardized inputs.
C. When the activity has no exceptions or variants.
D. When the activity involves the use of applications that are unlikely to change in the near future.

Answer: A

Question: 2

Who is primarily responsible for coordinating both the Implementation Team and the Client Team during an automation project?
Response:

A. The project manager.
B. The infrastructure engineer.
C. The business analyst.
D. The solution architect.

Answer: A

Question: 3

Why are exceptions important in the context of process automation?
Response:

A. They are crucial for evaluating the skills of the automation developers.
B. They serve as key performance metrics for the automation process.
C. They can help optimize the process further for automation.
D. They require specific handling logic and can affect the overall process execution.

Answer: D

Question: 4

What information does the 'Detailed As-Is Process Steps' in the PDD offer?
Response:

A. It includes the project timelines and stages.
B. It provides a graphical representation of the to-be automated process.
C. It articulates each step involved in the current manual process in detail with the related screenshots.
D. It lists the hardware and software requirements for the automation.

Answer: B

Question: 5

What does the 'Conclusion' section in the PDD usually include?
Response:

A. It includes feedback or reviews from the employees who will use the automated system.
B. It consists of all the technicalities that the process will bring post-automation.
C. It provides a timeline of the project.
D. It includes a brief summary of the document's purpose and benefits of the process automation.

Answer: D

Question: 6
