- ItsLatestVersion

# Latest Version: 6.0

## Question: 1

Which protocol and port number are used by default for IKE Phase 1 negotiations in an IPSec VPN?  
Response:

- A. UDP 500
- B. TCP 443
- C. UDP 4500
- D. TCP 22

**Answer: A**

## Question: 2

After upgrading PAN-OS, which action is recommended to ensure that all features function correctly?  
Response:

- A. Reboot the firewall multiple times.
- B. Reset all configurations to default.
- C. Verify and, if necessary, update content and application signatures.
- D. Disable and re-enable all interfaces.

**Answer: C**

## Question: 3

Before upgrading a Palo Alto Networks firewall to a new PAN-OS version, which preliminary step is crucial to ensure a smooth upgrade process?  
Response:

- A. Disable all security policies.
- B. Back up the current configuration.
- C. Reset the firewall to factory settings.
- D. Disable High Availability (HA) if configured.

**Answer: B**

### Question: 4

What is the function of a Certificate Revocation List (CRL) in a PKI?

Response:

- A. Lists expired certificates
- B. Lists certificates that have been revoked before their expiration date
- C. Lists all issued certificates
- D. Lists certificates pending renewal

**Answer: B**

### Question: 5

In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?

Response:

- A. The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.
- B. The firewall will deny access if the client certificate is invalid.
- C. The firewall will prompt the user to provide a valid client certificate.
- D. The firewall will log the failure and terminate the session.

**Answer: A**

### Question: 6

How do Zone Protection Profiles enhance network security?

Response:

- A. By providing protection against flood attacks, reconnaissance scans, and packet-based threats
- B. By replacing security policies with predefined rule sets
- C. By encrypting all traffic entering and leaving the zone
- D. By dynamically assigning users to security groups

**Answer: A**

### Question: 7

For explicit proxy deployment, which port is typically used by the client browsers to send requests to the proxy?

Response:

- A. 80
- B. 443
- C. 8080
- D. 8443

**Answer: C**

### Question: 8

In a Collector Group with multiple Log Collectors, enabling redundancy ensures that:

Response:

- A. Each log is stored only on the primary Log Collector.
- B. Each log has two copies, each residing on a different Log Collector.
- C. Logs are distributed based on a round-robin mechanism.
- D. Logs are stored in a compressed format to save space.

**Answer: B**

### Question: 9

What is a key difference between OSPF and BGP when used in a Palo Alto Networks firewall?

Response:

- A. OSPF is used for internal routing, while BGP is primarily used for external routing
- B. OSPF operates only on IPv6, while BGP is for IPv4
- C. BGP does not require neighbor relationships, while OSPF does
- D. OSPF is faster than BGP in all scenarios

**Answer: A**

### Question: 10

How does a Palo Alto firewall handle traffic between two different security zones?

Response:

- A. Traffic is denied by default unless a security policy explicitly allows it
- B. Traffic is allowed automatically between zones

- C. Traffic is automatically encrypted between zones
- D. Traffic between zones is forwarded without inspection

**Answer: A**
